

RESPIRATORY
AND
EXFOLIATIVE
SAMPLES

Orderable - BRUSH

Turnaround Time: Within 7 days

STAT: 1 day

Alternate Name(s):

Sputum
Post-Bronch Sputum
Bronchial: Washings & Brushings

Specimen:

Non-Gynaecological: Respiratory

Orange top routine specimen container containing 30 mL Cytolyt solution/specimen material.

Collection Information:

Click here for the [External Client Cytology Collection Method](#) if you are not at LHSC or SJH.

Reference Ranges:

See report

Interpretive Comments:

Clinical history is an important component for diagnostic interpretation.

Special Processing:

The specimen is Thinprep processed so the total specimen volume should not exceed one orange top specimen container with Cytolyt included.

Critical Information Required:

Laboratory:
Cytopathology Lab

Requisition:
[CYTOPATHOLOGY
REQUISITION- NON-
GYNAECOLOGICAL AREA](#)

Method of Analysis:

Test Schedule:
Weekdays

RESPIRATORY AND EXFOLIATIVE SAMPLES

It is important to clearly identify and separate all specified sites especially left and right.

Separate requisitions and specimen containers for all specimen types increases the accuracy of the diagnostic results.

Storage and Shipment:

Specimen container **must be** labelled with patient identification, specimen type and a Cytology fixative label previous to transport.

Transport all specimens in a biohazard transport bag with the specimen in the zipped area separating the requisition in the side pocket.
