

Post Operative Primary Central Nervous System Tumours for Adjuvant Chemotherapy-Radiation:

- Surgery done in London and patient from within our usual catchment
- Tissue confirmation of malignancy including pathology report (final pathology, preliminary pathology or frozen section) of the following tumours:
 - Glioblastoma Multiforme
 - Astrocytoma (Note that “Pilocytic Astrocytoma” is triaged under Adolescent Young Adult Glioma)
 - Oligodendroglioma
 - Ependymoma
 - Myxopapillary ependymoma
- Automatic triage booking with both neuro-oncology and radiation oncology (ideally on the same day/consecutive appointments within 5 business days or maximum of two weeks)

Primary Central Nervous System Lymphoma (PCNSL)

- Tissue confirmation of PCNSL including pathology report (final pathology, preliminary pathology or frozen section)
 - Immediate triaging by hematology-oncology DST required
 - Automatic triage booking to neuro-oncology in addition within two weeks

Unilateral Vestibular Schwannoma (VS) or meningioma

- If patient has had an operation then tissue confirmation of VS including pathology report (final pathology, preliminary pathology or frozen section) is required plus MRI head/gad or MRI auditory canal within the last 6 weeks
- If patient has not had an operation then only MRI head/gad or MRI auditory canal within the last 6 weeks is required

Post-Operative, Transfer of Care, Second Opinion Adolescent Young Adult Glioma (e.g. Pilocytic Astrocytoma)

- Excluded from automatic triage- send to triaging oncologist (Dr. Seth Climans or Dr. Maria MacDonald)

Patients falling outside of above guidelines

- Excluded from Automatic Triage- send to triaging oncologist (Dr. Seth Climans or Dr. Maria MacDonald)
