

12-LEAD ECG ACQUISITION AND INTERPRETATION COURSE

DECEMBER 4, 2019 | 12:00-4:30 PM

Tecumseh Station Training Room
975 Lesperance Road, Tecumseh

DECEMBER 9, 2019 | 12:00-4:30 PM

Tecumseh Station Training Room
975 Lesperance Road, Tecumseh

BRIEF DESCRIPTION

Join us for a **face-to-face (in class) presentation/course** on 12-Lead ECG acquisition and interpretation. Has it been a while since you have had a 12-Lead refresher? If so, there is no better time than now, with an updated, interactive, revamped course!

Prehospital 12-Lead ECGs can help determine the best treatment plan for patients suffering from cardiac ischemia, arrhythmia and life-threatening electrolyte abnormalities. Therefore, your knowledge and skills are vitally important to patient outcomes. If you are already certified, this course will provide you with a chance to refresh your knowledge of cardiac pathophysiology, practice your 12-Lead ECG acquisition and interpretation skills all while applying this knowledge to your daily practice through Medical Directives and Destination policy decisions.

Upon completion of his course, a paramedic will be able to:

- Understand basic cardiac anatomy and physiologic principles
- Recognize basic arrhythmias and anticipate interventions
- Recognize ST-segment changes on an ECG and anticipate interventions
- Recognize lethal electrolyte abnormalities on an ECG and anticipate interventions

REGISTER NOW

Registration will occur through the Paramedic Portal. Please make sure you're logged into the portal prior clicking the link below. This link will take you directly to the registration page.
